In the years following our building expansion and as the St. Matthew's parish community continued to grow it became more apparent that we were in need of acoustical improvements in our sanctuary. In addition, we were also now blessed with a community room (Heritage Hall) that could be better utilized with an audio-visual presentation system. After meeting with several vendors we decided to contract with Audio Visual Associates of Denville, who partnered with Sound Management Group of Hillsborough, to design a system and implement technology that would fully meet our immediate needs and allow for future expansion.

In order to maximize the quality of speech and sound, whereby the spoken word would be clearly audible at all Masses, acoustic panels were strategically placed in our sanctuary.

Heritage Hall was equipped with a ceiling mounted projector and motorized video screen recessed in the ceiling. With an upgraded sound system throughout we are now able to use Heritage Hall for professional quality presentations. The new system includes a centrally located wall-mounted control panel and equipment rack for our audio, video and stereo system.

We were very pleased with our project team from the early planning stages all the way through the implementation and training on our new sound and presentation systems.
