

OFFICE CUBICLE TOPPER™

COVID-19 SOLUTION

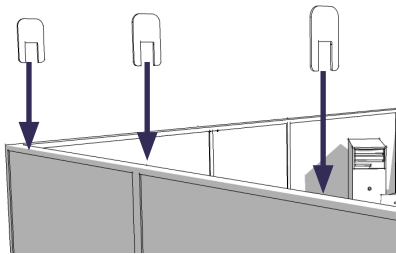

The cube topper is designed to extend the height of any office cubicle without any drilling, adhesive, or any permanent change to your existing office furniture. The product was developed by Sound Management Group to meet the requirements of their customer's Covid19 compliance. The cube topper simply slides onto the top of the existing cubicle with our patent pending design. The cube topper can extend your cubicle height 12" up to 24" in a matter of minutes.

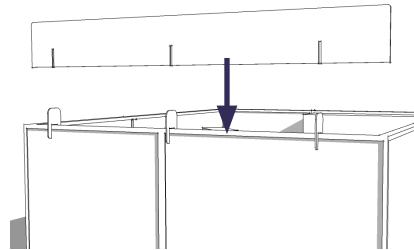

CUBICLE ASSEMBLY

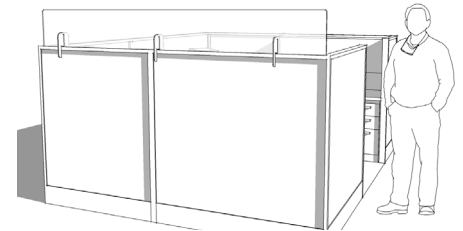

Confirmation of cubicle dimensions including thickness of top rail will be needed to give the optical grade acrylic topper a custom snug fit. Assembly couldn't be easier with no drilling or modifications of the existing cubicle required. See diagrams below:

1 Slide support legs over the cubicle top rail. There should be a snug fit.

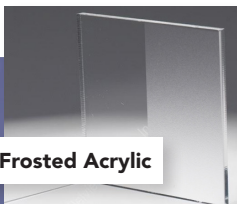

2 Line up the slots of the topper and slide it over the support legs.

3 Topper will sit securely on the top rail. Continue for all sides of cubicle.

TOPPER OPTIONS

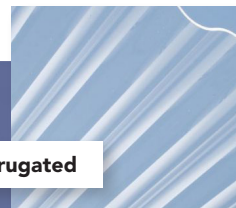

(please inquire for more available option and custom applications)

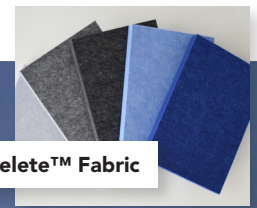

Clear & Frosted Acrylic

EcoAbsorb™

Corrugated

SoundDelete™ Fabric
